Practical No 01

Data Wrangling, I Perform the following operations using Python on any open source dataset (e.g., data.csv) Import all the required Python Libraries. Locate an open source data from the web (e.g. https://www.kaggle.com). Provide a clear description of the data and its source (i.e., URL of the web site).

Import all the python Libraries

```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
```

Load the Dataset into pandas data frame.

```
In [3]: df = pd.read_csv('titanic_train.csv')
df
```

Data Preprocessing: check for missing values in the data using pandas insult(), describe() function to get some initial statistics. Provide variable descriptions. Types of variables etc. Check the dimensions of the data frame.
